

Anticipate The Problem: Inadequate Risk Diversification

westwoodgroup.com/insight/anticipate-the-problem-inadequate-risk-diversification/

Bottom-up Multi-Asset investing can bring something very powerful and unique to a portfolio in the current environment

Many portfolios today have increasingly more exposure to top-down diversification or macro exposure as indexing has proliferated in investor portfolios. In an environment where index volatility increases across asset classes and correlations go to one, outperformance becomes a function of avoiding losses in the worst stock indices vs. adding higher quality stocks. A flexible, bottom-up multi-asset approach that can sync the asset allocation process to the stock selection process may help investors pursue equity-like returns with less risk. As investors look forward to

potentially rising interest rates and a lower nominal growth environment, a winner-take-all market environment creates a favorable backdrop for a bottom-up multi-asset approach particularly if you believe downside market volatility will increase.

2008: Potential Inadequate Risk Diversification in Top-Down Macro-Oriented Multi-Asset Class Strategies

2008

S&P 500	Average Performance		S&P 500	Average Performance	
	1H'08	2H'08		1H'08	2H'08
Top 50 Performing Stocks	37.9%	10.7%	Top 100 Performing Stocks	23.5%	1.1%
Bottom 50 Performing Stocks	-47.6%	-72.7%	Bottom 100 Performing Stocks	-38.8%	-64.8%
S&P 500 Performance	-12.8%	-29.4%	S&P 500 Performance	-12.8%	-29.4%

Why It Matters

The ability to invest with a flexible, bottom-up multi-asset strategy can help investors avoid the worst performing stocks during a market downturn. Many top-down macro-oriented multi-asset strategies tend to invest in “blunt” indexed instruments exposing investors to undue market risk that could be avoided with an active approach.
